ATTN: Interagency Working Group on Food Marketed to Children: Proposed Nutrition Principles: FTC Project No. P094513

To Whom it May Concern,

Trust for America's Health (TFAH) is pleased to have the opportunity to comment in response to the *Preliminary Proposed Nutrition Principles to Guide Industry Self-Regulatory Efforts* released by the Interagency Working Group on Food Marketed to Children. As you know, these standards represent the product of a bipartisan Congressional effort to ensure that our nation's children are not exposed to inaccurate or misleading messages about food choices. These proposed marketing standards will serve as a fundamental step in improving the nutritional profile of foods marketed to children. According to TFAH's 2011 report, *F as in Fat: How Obesity Threatens America's Future*, more than one-third of children ages 10–17 are obese (16.4 percent) or overweight (18.2 percent).<sup>1</sup> It is imperative to take action today to reduce the factors that contribute to this epidemic, including the marketing of unhealthy foods to children and adolescents.

Companies spend roughly \$2 billion each year on marketing mainly unhealthy foods and beverages to children and adolescents nationally. While some companies have voluntarily vowed to reduce food marketing of unhealthy foods, only 17 companies currently participate in the Council of Better Business Bureau's Children's Food and Beverage Initiative (CFBAI). Furthermore, studies indicate that current self-regulatory efforts are not sufficient. A 2009 report from Children Now determined that the majority of advertisements from the 15 food companies that were then participating in CFBAI were for foods of low nutritional value.<sup>2</sup> The report, "The Impact of Industry Self-

Oakland, CA: Children Now, December 2009. [http://www.childrennow.org/uploads/documents/adstudy\\_2009.pdf](http://www.childrennow.org/uploads/documents/adstudy_2009.pdf) (accessed May 17, 2010).

Regulation on the Nutritional Quality of Foods Advertised on Television to Children” found that few companies were meeting their voluntary commitments to reduce unhealthy marketing to children. Instead, more than two-thirds (68.5%) of all advertising studied was for foods and beverages in the lowest category of nutritional quality. According to a 2010 report released by the Yale Rudd Center for Food Policy and Obesity, children’s exposure to fast food TV ads is increasing, and snacks and desserts marketed directly to teens contain as many as 1,500 calories.<sup>3</sup>

The effects of food marketing are significant. A 2005 report released by the Institute of Medicine indicated that food marketing influences the health of children and adolescents in America, contributing to already high rates of obesity by affecting their food preferences, purchase requests, and dietary intake.<sup>4</sup> With 84 percent of parents reporting taking their child to a fast food restaurant at least once a week,<sup>5</sup> it is critical to support parents in their efforts to provide their children with nutritious foods.

Trust for America’s Health (TFAH) is a non-profit, non-partisan organization dedicated to saving lives by protecting the health of every community and working to make disease prevention a national priority. As a member of the Food Marketing Workgroup, TFAH has signed onto a letter supporting the proposed nutrition principles and marketing definitions, and offers the following recommendations that we hope will augment the efficacy of these principles.

### **Proposed Nutrition Principles:**

TFAH strongly supports the Working Group’s proposal for a food-based approach, which is essential to ensuring that foods marketed to children and adolescents constitute a meaningful contribution to a healthful diet. We further support the overall proposed nutrition principles, and offer the following recommendations that we hope will make them even stronger:

- We were very pleased that the Working Group has been guided significantly by the *2010 Dietary Guidelines for American’s (DGA)*. In order to remain consistent with the *Dietary Guidelines*, we support the proposed Principle A, Option 2—that the Working Group’s recommendations be based on serving sizes of foods. We recommend that an exception be made in the case of whole grains, and that the Working Group’s recommendation be made on the basis of percentages (as suggested in Principle A, Option 2). This would be consistent with the *Dietary*

*Guidelines'* recommendation that 50 percent of grain be whole grains.

- We urge the Working Group to revise the proposed timeline for implementation of the proposed nutritional standards to two years, and five years for the final implementation of sodium standards. Allowing ten years for companies to fully implement nutritional principles, as presently proposed, would needlessly expose an entire generation of children to the current extent of food marketing of unhealthy foods. Albeit strong, these nutritional standards are voluntary; therefore, urging for implementation within a two year timeline would increase their overall impact on children and adolescents.
- Nutritional standards should be applied to all foods marketed to children. Therefore, we recommend that the Working Group specify that *all* foods marketed to children are covered by the proposed nutrition principles, not only those marketed most heavily to children.
- TFAH strongly recommends the inclusion of calorie limits on foods marketed to children, which will better address the obesity epidemic.
- We urge the Working Group to combine fish, extra lean meat, poultry, eggs, nuts, and beans into a single food group. This is consistent with MyPlate and the *Dietary Guidelines* and avoids overemphasis of marketing meat, which is not a nutrient of public health concern for kids.

Thank you for your consideration of these views. We hope that our comments will assist the Interagency Working Group on Food Marketed to Children in improving the nutritional profile of foods marketed to children. The proposed nutritional standards will help to guide industry self-regulatory efforts in food marketing, thereby helping to promote a healthier diet for America's children, and reduce high rates of childhood obesity. We look forward to the release of final recommendations on food marketing nutrition standards by the end of 2011. If you have any questions, please do not hesitate to contact our Director of Government Relations, Becky Salay, at (202) 223-9870 ext. 15, or via email at [bsalay@tfah.org](mailto:bsalay@tfah.org).

Sincerely,

A handwritten signature in black ink, appearing to read "Jeffrey Levi". The signature is fluid and cursive, with the first name "Jeffrey" written in a larger, more prominent script than the last name "Levi".
