DEDICATED TO SAVING LIVES BY PROTECTING THE  
HEALTH OF EVERY COMMUNITY AND WORKING TO  
MAKE DISEASE PREVENTION A NATIONAL PRIORITY.

# Introduction

September 11 was a wake-up call that alerted the nation to the need for an effective public health system. But if the nation needed any further reminders, the events of the past few weeks and months have, unfortunately, provided many of them:

- The flu vaccine shortage in Fall 2004 left millions of Americans vulnerable to illness.
- The derailment of a chlorine-carrying train in South Carolina forced hundreds of people to seek immediate medical help and sadly, nine people died.
- The tsunami, while happening far from our shores, was a vivid illustration of the destructive power of nature -- a power that hurled four terrible hurricanes at Florida last fall.
- January 2005 mudslides in California devastated families and communities, and created the potential for contaminated water and subsequent disease.
- And while we must always be prepared to meet natural disasters, we must also be ready for man-made destruction from biological, chemical, and radiological terrorism.

With these and many other health challenges to face, all levels of government in the United States must place the highest priority on strengthening the public health infra-

structure. State and local governments have the chief responsibility for delivering public health services, but the federal government has an important role to play in a number of areas as well, including providing funding for state activities.

**Is the federal government doing enough to support the states and protect the health and lives of the American people? In this report, Trust for America's Health (TFAH) examines federal fund allocations to each of the 50 states for selected public health programs.**

Every decade, the U.S. Department of Health and Human Services (HHS) defines national objectives for reducing disease and improving health in a document called *Healthy People*.<sup>1</sup> Overall, the progress toward achieving most of these goals is falling far short, and there has not been sufficient funding or strategies to result in wide-scale change.

In the most recent *Healthy People 2010* report, some examples of "leading health indicator" goals for the end of the decade include:

Target Goal for the Year 2010	Recent Status Check
Reducing obesity levels to 15 percent for adults and five percent for children and adolescents.	Currently, no state meets the national goal and nearly two-thirds of the U.S. adult population is overweight or obese. <sup>2</sup> Forty-one states have obesity levels above 20 percent for adults. <sup>3</sup> In 22 out of 31 reporting states, 10 percent or more of high school students were overweight. <sup>4</sup> <ul style="list-style-type: none"> <li>• Forty states have diabetes rates of six percent or higher.<sup>5</sup></li> <li>• Forty-eight states have hypertension levels of 20 percent or higher.<sup>6</sup></li> </ul>
Reducing tobacco use to 12 percent of adults and 16 percent of adolescents.	In 2002, 23 percent of adults were current smokers, and in 2003, 21.9 percent of adolescents were current smokers. <sup>7</sup>
Reducing the percent of the U.S. population exposed to ozone above the recommended U.S. Environmental Protection Agency (EPA) levels to zero.	In 2001, 41 percent of the U.S. population was exposed to ozone levels higher than the EPA recommendation. <sup>8</sup>
Increasing immunization rates to 80 percent for recommended childhood vaccinations and 90 percent for senior citizen (ages 65 and over) influenza vaccinations.	In 2003, the level of immunized children was 79.4 percent, and only 66 percent of adults over 65 received a flu vaccine in 2002. <sup>9</sup>

# State-By-State Statistics

In this document, TFAH reviewed key health statistics and some of the federal public health funds that each state receives.

The information on the individual state charts include publicly available health statistics, primarily from surveys conducted by the Centers for Disease Control and Prevention (CDC), and federal public health funding data that include program grants from CDC and Health Resources and Services Administration (HRSA) of the U.S. Public Health Service (PHS).

- The CDC programs included in the calculations are: Cancer Prevention, Chronic Disease Prevention/Health Promotion, Diabetes Control, Environmental Health, HIV Prevention, Immunization, and Infectious Diseases. The total CDC dollars and per capita spending figures reflect all of the agency's programs, not just those enumerated here.
- The HRSA programs included in the calculations are: the Ryan White Comprehensive AIDS Resources Emergency Act (CARE Act), the Maternal and Child Health Block Grant (MCHBG), and the Health Professionals Grants.
- Bioterrorism numbers reflect both CDC and HRSA funds.
- HRSA Ryan White CARE Act funding and the number of AIDS cases per state were provided by AIDS Action. Child and Maternal Health Block Grant figures, infant mortality rates, and low birth weight data were provided by the Association of Maternal and Child Health Programs. Information with respect to health professions was provided by HRSA's Bureau of Health Professions. For a detailed list of references and methodology, see Appendix B.

This review is not meant to be a comprehensive inventory of all federal public health programs and their allocations to states and

localities. Rather, it is a snapshot of important public health programs that Congress funds, which in turn are used to support state and local public health agencies. For instance, approximately **80 percent of the funding for CDC, the federal agency devoted to disease prevention and control, is distributed to state and local public health agencies and other health and research organizations through grant programs.**

TFAH also examined the per capita CDC funding for each state. This information was calculated by dividing the federal funds provided by the total state population from 2000 U.S. Census data. Per capita childhood immunization figures were calculated by dividing the funding by the under 18 state population from the 2000 Census.

The charts demonstrate that federal health spending and health of people in each state do not correlate.

The funding, instead, more often reflects discrete program grants targeted toward specific initiatives in the state. Typically, granting from CDC is a competitive process that requires states to submit applications for funds, and there generally are not enough dollars appropriated by the legislative branch to support all of the qualified applicants or all of the states. Other CDC grants are formula-based.

The states receiving the most dollars per capita include Alaska, Vermont, Wyoming, North Dakota, and Rhode Island, receiving \$45.74 to \$26.31. At the other end of the spectrum are Virginia, Florida, Pennsylvania, Ohio, and Indiana, at \$11.42 to \$9.61.

The following table includes only the CDC total funds, per capita dollars, and the ranking for each of the 50 states.

SUMMARY OF CDC DOLLARS – FY 2004			
State	Total Dollars FY 2004 (All Categories)	CDC Per Capita Total (Dollars)	CDC Per Capita Ranking FY 2004
Alaska	\$28,672,981	\$45.74	1
Vermont	\$19,718,842	\$32.39	2
Wyoming	\$14,134,785	\$28.63	3
North Dakota	\$17,015,155	\$26.50	4
Rhode Island	\$27,585,867	\$26.31	5
Hawaii	\$29,953,642	\$24.72	6
South Dakota	\$18,565,521	\$24.60	7
Maryland	\$125,226,620	\$23.64	8

## TO ACHIEVE A HEALTHY AMERICA, WE MUST INVEST MORE IN THESE VITAL PROGRAMS

### EXAMPLES OF PER CAPITA FEDERAL PROGRAM FUNDING

- Alaska and West Virginia receive the most per capita spending for cancer prevention at \$8.87 and \$3.10 respectively.
- Alaska also receives the most per capita for chronic disease prevention/health promotion (\$7.28), followed by Vermont (\$4.91).
- For diabetes control, Hawaii (\$1.90) and Washington (\$1.18) receive the most funding.
- Utah receives the most per capita for environmental health (\$1.29), and New Mexico is second (\$1.27)

### HEALTH THREATS IN 2004, 2005, AND BEYOND

#### Terrorism

- Since September 11, 2001, the threat of potential biological, chemical, and radiological terrorism has become more urgent.

#### Natural Disaster Response

- Assisting the injured and containing disease became paramount in these natural disasters and accidents:
  - ▲ Severe tornadoes in the Midwest.
  - ▲ Hurricanes in Florida and other parts of the Southeast and Middle Atlantic.
  - ▲ Wild fires, flooding, and mudslides in California.
  - ▲ Chemical spill in South Carolina.

#### Infectious Diseases

- West Nile virus across the U.S., significantly hitting the Southwest and West Coast for the first time.
- Norovirus outbreak in Maryland.
- Economic ripples from the first discovery in December 2003 of mad cow disease in the U.S. Five major foodborne pathogens alone cost \$6.9 billion every year in premature deaths, medical costs, and lost productivity.
- Twenty percent of U.S. preschoolers do not receive all recommended vaccinations.
- Asian “bird flu” outbreak and fear of an upcoming worldwide pandemic (new, highly infectious strain) coupled with a flu vaccine shortage, with half of expected doses unavailable in the U.S.

#### Cancer, Diabetes, Asthma, and other Chronic Diseases

- More than 90 million Americans live with chronic diseases such as heart disease, stroke, cancer, and diabetes. These diseases cost approximately \$750 billion in annual health care costs and lost productivity and account for four out of five deaths in the U.S. Nearly 75 percent of these diseases are preventable, according to the CDC.<sup>10</sup>
- Sixty percent of Americans are now considered overweight or obese.<sup>11</sup>
- In addition, 20 percent of the population experiences a mental illness in a given year and over nine percent of the population has a substance abuse problem that needs treatment. Most of these disorders go untreated and much more could be done to prevent them altogether or to mitigate the billions of dollars in annual costs to society.

## WHAT PUBLIC HEALTH IS -- AND WHY WE SHOULD INVEST IN IT

Public health is all about the prevention and reduction of disease. A strong public health system could produce enormous benefits for the American people. For instance, the Newhouse News Service reported on April 22, 2004, that an “analysis by Dr. Julie Gerberding, director of the Centers for Disease Control and Prevention, [found that] ‘robust’ funding [of disease prevention programs] could:

- Prevent 43,000 amputations, 165,000 kidney failures and more than 10,000 cases of eye disease among diabetics each year.
- Reduce traffic deaths by 9,000 annually.
- Halve the 40,000 new HIV cases that occur each year.
- Reduce alcohol-exposed pregnancies by two-thirds.
- Eliminate childhood lead poisoning by 2010.”

## PUTTING THE FOCUS ON PREVENTION IS THE FIRST STEP TO A HEALTHIER U.S.

### I. The U.S. faces a wide array of health crises, yet the policies and programs needed to protect Americans’ lives are insufficient.

In one international study comparing industrialized nations, the U.S. ranked 12th out of the 13 based on 16 health indicators.<sup>12</sup> Numerous evaluations of the nation’s public health system, including those conducted by the CDC and Institute of Medicine (IOM), have raised serious concerns about the nation’s public health readiness.

- The CDC’s 2001 report, *Public Health Infrastructure -- A Status Report*, stated that the U.S. public health infrastructure “is still structurally weak in nearly every area.”<sup>13</sup>
- A 2003 IOM study found serious problems ranging from outdated health information systems to antiquated laboratory capacity to a lack of access to public health services in some communities.<sup>14</sup>

## 2. The nation needs to develop a proactive approach to health that focuses on prevention of illness and injury in order to save lives, save money, and make Americans healthier.

- Health policies, programs, and practices have focused almost entirely on treating people after they have become sick or harmed, rather than preventing illness and harm in the first place.
- In 2003, **92 percent** of total health sector dollars were spent on medical care. On the other hand, only **eight percent** of health dollars in the U.S. are spent on health promotion aimed at *improving the public's health*.<sup>15</sup> Recent polling data show that Americans believe more money should go toward researching causes and preventing disease. The poll found that nearly three quarters (71 percent) of registered voters

think the federal government is not spending enough on such activities. Further, more than a third (37 percent) say “much more” should be spent on research and prevention activities.<sup>16</sup>

- In 2003, federal spending on *health care* programs run by the Centers for Medicare and Medicaid services totaled **\$442 billion**. Federal spending on *major disease prevention* and *health promotion* programs totaled **only about 10 percent of that** – just under **\$50 billion**.<sup>17</sup>
- Recent data show that average medical care costs in the last year of life approach **\$40,000**.<sup>18</sup>

## 3. America's public health system is not a single entity, but rather a loosely affiliated network of approximately 3,000 federal, state, and local governmental health agencies often working closely with private sector voluntary and professional health associations.

The federal role revolves around policymaking, financing activities, overseeing disease prevention efforts, collecting and disseminating health information, building capacity, and directly managing some services.<sup>19</sup>

The state and local roles are traditionally responsible for basic services, such as prevention programs, information systems, disease surveillance or tracking, and workforce training. However, vast differences exist across the country in the structure, authority, resources, and funding for state and local public health agencies.

- There are no nationwide minimum standards, guidelines, or recommendations for levels of capacity or service for state and local health departments.

- There are no standardized mechanisms for regular community involvement or responsiveness to community inquiries about health programs and services.

- The new U.S. Department of Homeland Security (DHS) National Response Plan relies on state and local responders in the event of mass emergencies, even though the capabilities are often inconsistent and uncertain due to lack of standards.

State and local spending on public health was 2.5 times the federal level, accounting for 70 percent of public health service spending in 2000.<sup>20</sup> Federal funding for public health programs to states is largely in the form of categorical grants for specific programs.<sup>21</sup> In fact, CDC alone returns about 75 to 80 percent of its annual appropriations to states and localities.

## WHAT DOES EMERGENCY PREPAREDNESS LOOK LIKE? WHAT EVERY AMERICAN SHOULD EXPECT OF OUR PUBLIC HEALTH SYSTEM

24-7 emergency and ongoing response capabilities must include:

- Rapid **detection** of emerging diseases and ongoing tracking of ongoing health threats.
- Intensive **investigative** capabilities to determine causes or contributing factors of diseases and illness.
- Mass **containment, control, and treatment strategies**, including planning, surge workforce capacity, equipment, and pharmaceuticals to meet potential wide scale vaccination, antidote, and treatment needs.
- Streamlined and clear **communications** channels so that health care workers are communicating at all levels (including emergency responders, hospitals, and local, state, and federal health agencies) and the public is swiftly and adequately informed of health concerns.

What It Will Take to Achieve Adequate Preparedness:

- **Leadership, Planning, and Coordination:** An established chain of command and well defined roles and responsibilities for seamless operations between different medical and scientific functions.
- **Expert and Comprehensive Workforce:** Highly trained and full staffs of experts, scientists, and other health professionals.
- **Modernized Technology:** State-of-the-art laboratory equipment, information collection, and health tracking systems.
- **Pre-Planned, Safety-First Rapid Emergency Response Capabilities and Precautions:** Tested plans and safety precautions to mitigate potential harm to communities and public health professionals and first responders.
- **Immediate, Streamlined Communications Capabilities:** Coordinated, integrated communication among all parts of the public health system and with the public.

## PUBLIC HEALTH BENEFITS EVERYONE

**YOU AND YOUR FAMILY:** With more than 90 million Americans living with chronic disease, chances are someone close to you suffers everyday. From autism to Alzheimer's to cancer and diabetes, most of these diseases -- and many of the millions of resulting deaths -- could be prevented.

**YOUR COMMUNITY:** When health emergencies arise -- whether it's an outbreak of SARS, a bioterrorist attack, or skyrocketing asthma rates -- health professionals need to be prepared, trained, and equipped to respond rapidly and effectively. Lives depend on it.

**YOUR COUNTRY:** The system that protects us from disease and epidemics has been dangerously neglected for the past three decades, leaving our nation at risk. Until we make disease prevention a national priority, this continued neglect will exact an extraordinary human toll.

**YOUR MOVE:** Picture a country where...

- Diseases and injuries are prevented, not just treated.
- People are protected against health threats of all kinds.
- Strong, responsive communities help their citizens to lead healthier lives.

By working together, we can have a healthy nation and save lives by stopping health threats in their tracks.

 <b>THE STATE OF YOUR HEALTH: ALABAMA</b>

## FEDERAL AGENCIES INVOLVED IN PUBLIC HEALTH

### FEDERAL STRUCTURE AND AUTHORITY

The federal agency with primary responsibility for public health activities is HHS. Within HHS, the Public Health Service (PHS) conducts various health functions including disease control, health regulation, research and direct provision of services.<sup>22</sup> Eight agencies, reporting to the HHS secretary, comprise the PHS:

- **Agency for Healthcare Research and Quality (AHRQ)**
- **Agency for Toxic Substances and Disease Registry (ATSDR)**
- **Centers for Disease Control and Prevention (CDC)**
- **Food and Drug Administration (FDA)**
- **Health Resources and Services Administration (HRSA)**
- **Indian Health Service (IHS)**
- **National Institutes of Health (NIH)**
- **Substance Abuse and Mental Health Services Administration (SAMHSA)**

The **Office of Public Health and Science (OPHS)** and the **Office of the Assistant Secretary for Public Health Emergency Preparedness (ASPHEP)** are two other offices in HHS with important public health responsibilities.

In addition to HHS; over 50 federal agencies and departments are involved in some aspect of public health.

**Department of Agriculture (USDA):** Through the **Center for Nutrition Policy and Promotion**, the **Food Safety Inspection Service**, the **Animal and Plant Health Inspection Service**, and the **Animal Research Service**, the USDA is involved in a range of health-related initiatives. These include ensuring the safety of meat, poultry, and egg products; tracking the impact of infectious diseases on U.S. livestock and poultry; promoting healthy food and nutrition initiatives, and overseeing practices to provide safe drinking water to rural America.

**Department of Defense (DOD):** Administers major health care and prevention programs, runs BSL-4 lab, and funds research for various diseases through such divisions and initiatives as the **U.S. Army Medical Research Institute of Infectious Diseases**, the **Armed Services Blood Program Office**, and the **Global Emerging Infections Surveillance and Response System**.

**Department of Education (ED):** The **Office of Safe and Drug-Free Schools (OSDFS)** oversees physical education, mental health, drug education, and anti-violence campaigns designed to promote national student health and a safe school-going experience.

**Department of Energy (DOE):** The **Office of Environmental Management** ensures the safe handling of waste generated by energy production; tests soil, air, and water near energy sites; and supports epidemiological research on the health effects of radiation exposure.

**Department of Homeland Security (DHS):** Through divisions such as **Border and Transportation Security** and **Emergency Preparedness and Response**, works to prevent terrorist attacks and plans for effective response procedures to threats. Specific health-related initiatives focus on enforcing animal and plant embargoes and improving the public health system's readiness for a bioterrorist attack.

### FEDERAL STRUCTURE AND AUTHORITY

**Department of Justice (DOJ): Bureau of Alcohol, Tobacco, Firearms, and Explosives (ATF),** formerly housed in Treasury, oversees initiatives designed to protect the public from health risks posed by illegal distribution and sales of alcohol, tobacco, and firearms.

**Department of Labor:** The **Occupational Safety and Health Administration (OSHA)** and the **Mine Safety and Health Administration (MSHA)** promote standards and regulations to protect the health and safety of workers in the U.S.

**Department of Transportation (DOT):** The **National Highway Traffic Safety Administration (NHTSA)** promotes vehicle safety and healthy behavior on U.S. highways through public health-related practices such as anti-drunk driving initiatives and seat belt laws.

**Department of the Treasury:** Promotes the compliance of alcohol and tobacco product manufacturing, marketing and importation with federal laws, and oversees the collection and levy of related taxes through the **Alcohol and Tobacco Tax and Trade Bureau**.

**Department of Veterans Affairs (VA):** Offers public health and medical services (including veterans health benefits), engages in collaborative medical and health research, and is on-call for mobilization duties in the advent of emergencies and disasters.

**Environmental Protection Agency (EPA):** Sets and enforces standards for air and water quality, pesticide use, waste and recycling, and chemical use, and researches and partners with local and state agencies to assess environmental impact of disease.

### Independent Establishments and Government Corporations

**Consumer Product Safety Commission (CPSC):** Oversees consumer product safety initiatives, including monitoring health hazards in toys, cribs, power tools, cigarette lighters, and household chemicals.

**Federal Trade Commission (FTC):** Enforces federal truth-in-advertising laws on claims for weight-loss advertising, foods, drugs, dietary supplements, and other products promising health benefits. Monitors unfair practices, including deceptive claims on tobacco and alcohol advertising, and reports to Congress on cigarette and smokeless tobacco labeling, advertising, and promotion.

**Nuclear Regulatory Commission (NRC):** Regulates use of nuclear materials. Works in conjunction with environmental and public health professionals to plan for and respond to potential nuclear emergencies (such as Three Mile Island)

**President's Commission on Physical Fitness:** Recommends programs to the President and the Secretary of Health and Human Services that encourage nationwide participation in physical fitness, physical activity and sports activities.

# Appendix B:

## NOTES ON DATA AND METHODOLOGY

**T**he sources for the funds and indicators come from a variety of publicly available sources. In some cases fiscal years for funding may vary depending on availability of data, and year of health indicators may vary slightly as well.

### Funding References

**Cancer Prevention** FY 2004 data come from the CDC.

**Chronic Disease Prevention/Health Promotion** FY 2004 data come from the CDC.

**Diabetes Control** FY 2004 data come from the CDC.

**Environmental Health** FY 2004 data come from the CDC.

**HIV Prevention** FY 2004 data come from the CDC.

**Immunization** FY 2004 data come from the CDC.

**Infectious Diseases** FY 2004 data come from the CDC.

**Total CDC Funds for State and Local Health Departments and Other Public/Private Agencies** FY 2004 data come from the CDC.

**Per Capita Total CDC Funds for State and Local Health Departments and Other Public/Private Agencies** was computed by dividing the state total from the CDC by the state population using 2000 U.S. Census Data. Per capita immunization funds were

computed by dividing the state total from the CDC by the under 18 population using 2000 U.S. Census Data.

**Per Capita Ranking of Total CDC Funds for State and Local Health Departments and Other Public/Private Agencies** was computed based on per capita state funding.

**CDC, HRSA, and Total Bioterrorism Preparedness Spending** FY 2004 as reported in "Ready or Not? Protecting the Public's Health in the Age of Bioterrorism: 2004," Trust for America's Health. Available at <http://healthyamericans.org/reports/bioterror04>.

**HRSA Ryan White Comprehensive AIDS Resources Emergency Act** FY 2003 data come from AIDS Action Fact Sheets available at [aidsaction.org](http://aidsaction.org).

**HRSA Maternal and Child Health Block Grant** FY 2004 data come from the HRSA Maternal and Child Health Bureau available at <https://performance.hrsa.gov/mchb/mchreports/>.

**HRSA Health Professions Grants** FY 2004 data come from the HRSA Bureau of Health Professions.

**Percentage of Adults with Diabetes** 2003 data come from the Behavioral Risk Factor Surveillance System, Prevalence Data 2003. National Center for Chronic Disease Prevention & Health Promotion, Centers for Disease Control and Prevention. Available at <http://apps.nccd.cdc.gov/brfss/index.asp>.

**Percentage of Obese Adults** 2003 data come from the Behavioral Risk Factor Surveillance System, Prevalence Data 2003. National Center for Chronic Disease Prevention & Health Promotion, Centers for Disease Control and Prevention. Available at <http://apps.nccd.cdc.gov/brfss/index.asp>.

**New Cases of Cancer Per 100,000 Persons** 2001 (Both Men and Women) data come from the U.S. Cancer Statistics Working Group. United States Cancer Statistics: 1999-2001 Incidence and Mortality Web-based Report Version. Atlanta (GA): Department of Health and Human Services, Centers for Disease Control and Prevention, and National Cancer Institute; 2004. Available at [www.cdc.gov/cancer/npcr/uscs](http://www.cdc.gov/cancer/npcr/uscs).

**Number of Deaths Due to Heart Disease Per 100,000 Persons** 2001 data come from the Centers for Disease Control and Prevention. The Burden of Chronic Diseases and Their

### Child Health Indicators References

**Percent of High School Students with Overweight** (2003) data come from the "Youth Risk Behavior Surveillance-United States, 2003," Morbidity and Mortality Weekly Report: 53 (Atlanta, Georgia: Centers for Disease Control and Prevention, 21 May 2004): Number SS-2, Table 59. Available at <http://www.cdc.gov/mmwr/preview/mmwr.html/ss5302a1.htm>.

**Percent of Children 19 to 35 Fully Immunized** (2003) data come from "Estimated Vaccination Coverage with 4:3:1:3:3 Among Children 19-35 Months of Age by Race/Ethnicity and by State and Immunization Action Plan Area -US, National Immunization Survey, 2003," Centers for Disease Control and Prevention,

### Other Public Health Indicators

**Number of Primary Care Health Professionals Shortage Areas** (as of September 30, 2004) data was provided by the HRSA Bureau of Health Professions.

**Risk Factors: National and State Perspectives** 2004, February 2004. Available at <http://www.cdc.gov/nccdphp/burden-book2004>.

**Number of Human West Nile Cases** 2004 data come from the Division of Vector-Borne Infectious Diseases, 2004 West Nile Virus Activity in the United States, Centers for Disease Control and Prevention. Available at [http://www.cdc.gov/ncidod/dvbid/west-nile/surv&controlcasecount04\\_detailed.htm](http://www.cdc.gov/ncidod/dvbid/west-nile/surv&controlcasecount04_detailed.htm).

**Number of Persons Living with AIDS** (2003 Year End) data come from AIDS Action Fact Sheets. Available at [aidsaction.org](http://aidsaction.org). Note: Data for IL is through January 2004, MS through 2002 year end, and NY through 2001 year end.

**Cumulative Number of AIDS Cases** (2003 Year end) data come from AIDS Action Fact Sheets. Available at [aidsaction.org](http://aidsaction.org). Note: Data for IL is through January 2004, MS through 2002 year end, and NY through 2001 year end.

National Center for Health Statistics. Available at [http://www.cdc.gov/nip/coverage/nis/03/tab29\\_43133\\_race\\_iap.xls](http://www.cdc.gov/nip/coverage/nis/03/tab29_43133_race_iap.xls).

**Infant Deaths Per 1,000 Live Births** (2000-2002) data come from "Statistics in Health, United States 2004 With Chartbook on Trends in the Health of Americans," National Center for Health Statistics, Hyattsville, Maryland: 2004. Table 23. Available at <http://www.cdc.gov/nchs/hus.htm>.

**Number of Low Birthweight Live Births** (2000-2002) data come from "Statistics in Health, United States 2004 With Chartbook on Trends in the Health of Americans," National Center for Health Statistics, Hyattsville, Maryland: 2004. Table 14. Available at <http://www.cdc.gov/nchs/hus.htm>.

**Receipt of CDC Environmental Health Grant** (2002, 2003) data was provided from the CDC National Center for Environmental Health.

# Appendix C:

STATE-BY-STATE HEALTH INDICATORS																
State	ADULT HEALTH INDICATORS									CHILD HEALTH INDICATORS				OTHER PUBLIC HEALTH INDICATORS		
	Percentage of Adults with Asthma (2003)	Percentage of Adults with Diabetes (2003)	Percentage of Obese Adults (2003)	New Cases of Cancer Per 100,000 Persons MEN (2001)	New Cases of Cancer Per 100,000 Persons WOMEN (2001)	Number of Deaths Due to Diseases of the Heart Per 100,000 Persons (2001)	Number of Human West Nile Cases (2004)	Number of Persons Living With AIDS (2003 Yr End)	Cumulative Number of AIDS Cases (2003 Yr End)	Percent of Children (Under 18) with Asthma (2002)	Percent of High School Students with Overweight (2003)	Percent of Children 19-35 Months Fully Immunized (2003)	Infant Deaths Per 1,000 Live Births (2000-2002)	Number of Low Birthweight Live Births (2000-2002)	Number of Primary Care Health Professions Shortage Areas (As of 9/30/04)	Receipt of CDC Environmental Public Health Tracking Grant (Year)
